

ORGANISATIONAL PERFORMANCE MANAGEMENT

CATEGORIES

Organisational performance management is a means to introduce business improvement across the organisation.

Mercor uses extensive management tools including developing custom software platforms (xScores) to automate performance management and measurement services and workflows, for example: benchmarking, risk, selection criteria, financial risk or reward, quality assurance, process improvement, health checks, etc.

System Analysis
User Acceptance Testing

SYSTEMS DEVELOPMENT

The development methodology is based on an end-to-end process model. The application is constructed on a secure web application stack that can be hosted internally or independently.

System Features:

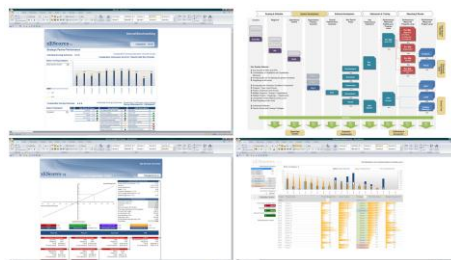

- Customisation: Centralised Management
- Security: Access and Viewing Privileges
- Flexibility: Modular Design and Integration

DATA MODELING AND ANALYTICS

The data model allows the system to perform advanced calculations and generating management reports, e.g. scorecards, dashboards, and customised spread sheets for further analysis and data visualization.

Advanced Features:

- Enterprise Reporting
- Trending and Forecasting
- Scenario Modeling
